Optional

I "CAN"...

Order of Operations

Evaluate the following expression:

$$4 + [3 \times (14 + 6)] \div 2$$

A. 34

C. 70

Which expression shows 24 divided by 3,
times the sum of 8 and 4?

A.

$$(24 \div 3) \times (8 + 4)$$

C.

$$24 \div (3 \times 8) + 4$$

At the bake sale cookies cost \$0.50, and brownies cost \$1.00. Write an
expression that shows the total cost of 3 cookies and 2 brownies.

**Student Recording Sheet
& Answer Key**

**Covers all 5th Grade Standards
related to Order of Operations.**

30 questions

In two formats

***Multiple Choice**

***Short Answer**

****BOTH formats come
with and without QR codes!**

Perfect for...

- Math Centers/Guided Math
- Progress Monitoring
- Independent Practice
- Whole-Class Practice
- Test-Prep

Which expression shows 24 divided by 3,
times the sum of 8 and 4?

A. $(24 \div 3) \times (8 + 4)$ C. $24 \div (3 \times 8) + 4$
B. $24 \div 3 \times 8 + 4$ D. $8 + 4 \times 24 \div 3$

Order of Operations

Which expression shows 24 divided by 3,
times the sum of 8 and 4?

A. $(24 \div 3) \times (8 + 4)$ C. $24 \div (3 \times 8) + 4$
B. $24 \div 3 \times 8 + 4$ D. $8 + 4 \times 24 \div 3$

Order of Operations

Write an expression that shows 24
divided by 3, times the sum of 8 and 4.

Order of Operations

Write an expression that shows 24
divided by 3, times the sum of 8 and 4.

Order of Operations

Here is a **SAMPLE** of questions included in this game, in all different formats. *30 Questions Included
ALL questions come in multiple choice AND short answer.
(with and without QR codes)

Evaluate the following expression:

$$4 + [3 \times (14 + 6)] \div 2$$

A. 34

C. 70

B.

3

Which expression shows 7 more than the product of 8 times 9?

A. $7 \times 8 \times 9$

C. $(7 + 8) \times 9$

B. $7 + (8 \times 9)$

D. $7 \times (8 + 9)$

Order of Operations

When solving the following expression, what is the first step you should take?

$$36 + 9 \times 10 \div 2$$

A. $36 + 9$

C. $10 \div 2$

B. 9×10

D. $36 \div 2$

18

$$89 - 7 \times 12 = A \quad (9 + 9) 2 = B$$

Which of the following is true?

A. $A > B$

B. $A < B$

C. $A = B$

Order of Operations

What is the relationship between A and B?

$$(81 \div 9) + 15 = A$$

$$81 \div 9 = B$$

24

Michelle bought 20 bananas. She ate 2 bananas on her way home from the store. When she got home she split the bananas into 2 bowls. Write an expression that shows how many bananas are in each bowl.

29

Order of Operations

WHY TEACHERS LOVE THESE GAMES!

****CONSISTENCY****

These games add consistency to your classroom no matter how or when you use them. Once students learn how to use these games, they become more independent and you will not have to spend time teaching students how to play ever again.

****VARIETY****

These games are different from most because they include a variety of question types for each standard. Also, each question comes in TWO different formats (multiple choice and short answer) so you can choose the format that best fits your students' needs. QR codes are also an option!

****FLEXIBILITY****

There are so many ways to use and store these games!
(see next pages for more information)

****RIGOR****

A majority of the questions included are rigorous and not "surface level" questions. Depending on the standard, questions require students to demonstrate a deeper understanding of each concept.

ORGANIZING "I CAN" GAMES

(MATH & GRAMMAR GAMES SHOWN BELOW)

IN A CAN
(TENNIS BALL CAN OR
SIMILAR SIZED CONTAINERS)

IN A PENCIL BOX

ON A RING

IN A BINDER

IN A FOLDER

SO MANY WAYS TO USE THIS RESOURCE

SMALL GROUP ACTIVITY OR CENTER

Place this “I Can” game out as one of your centers. In groups of 2 or more, students can play this game against one another by seeing who can collect the most cards. To collect a card, students must answer the question correctly. If they check their answer and it is incorrect, another player can attempt to answer the question correctly and keep the card for themselves. If a student pulls an “I Can” card, they can add this to their pile of cards as a bonus and pull another card to solve.

INDEPENDENT ACTIVITY

Students will pull a card from the can and answer it. They should record their answers on the “My Answers” sheet. When they are finished, they can check their answers using the answer key or QR code. It is a good idea to offer a reward/incentive for completing the set of cards, and/or mastering a certain percentage.

PROGRESS MONITORING TOOL

When students complete this activity independently, have them keep track of their progress using the “Checklist” provided (or you can use the checklist and check their work yourself). You can then use this checklist to see if the student has mastered the focus skill. You can also use this information to help you determine if, and in what area, further instruction is needed.

Standards Covered in this Resource

CCSS.Math.Content.5.OA.A.1

Use parentheses, brackets, or braces in numerical expressions, and evaluate expressions with these symbols.

CCSS.Math.Content.5.OA.A.2

Write simple expressions that record calculations with numbers, and interpret numerical expressions without evaluating them. For example, express the calculation “add 8 and 7, then multiply by 2” as $2 \times (8 + 7)$. Recognize that $3 \times (18932 + 921)$ is three times as large as $18932 + 921$, without having to calculate the indicated sum or product.
